

European Parliament Joint Intergroup Meeting

The future of Europe is co-created.

Digital public services for age-friendly cities and communities

European Parliament, 29 January 2019

Rationale

Despite public services are more and more provided in digital forms, their take-up remains low. In the 2017 Ministerial Declaration in Tallin, European Member States acknowledged that “more needs to be done” in order to provide citizen-centric digital public services. Part of the challenge lays on government’s lack of tools and experience on how to involve citizens, especially the less digital literate ones, in the design, planning, implementation and evaluation of digital services in order to effectively address their needs and expectations.

The Horizon2020-funded **Mobile-Age project**, together with older persons, local governments, social care service providers, and researchers, has developed and tested a co-creation methodology and a set of practical and accessible mobile applications in pilot sites across Europe (Bremen, South Lakeland, Zaragoza and Region Central Macedonia).

Hosted by the **Intergroup on Active Ageing, Intergenerational Solidarity and Family issues**, and the **URBAN Intergroup**, this event offered tools and insights paving the way to European strategies putting citizens’ needs on the agenda of European policies.

Main conclusions

Co-creation helps smart cities and villages to understand the diversity of needs of their older residents. In this context, the key role of local and regional authorities was highlighted by Kieran McCarthy - Committee of the Regions and the Cork City Council: “localities are at the

heart of changes, they are becoming ‘glocalities’ (acting locally, connected globally), and need to adapt constantly. Horizon2020 projects offer practical solutions to cope with changes, and with that respect the Mobile-Age project is a great example which deserves a follow-up”.

Indeed, the Mobile-Age project has the potential to move forward, and its tools are suitable to help policy-makers and researchers shaping the society we want to live in. Prof. Niall Hayes - Project Coordinator of Mobile-Age, emphasized the take-away messages from the project: *“in the first place, the accent must be on what **meaningful services** are, and in the case of Mobile-Age we investigated what is meaningful to older adults; secondly, we developed services with older adults, not only for them, but actually with them; and thirdly, we studied ourselves along the pathway, through rounds of assessments, in order to improve our actions and our outcomes at each iteration”.*

Among the added values of the project, MEP Lambert Van Nistelrooij welcomed the Mobile-Age’s approach based on co-creation: *“considering the **social dimension** is key, we may be technology-driven, but we need to step back and use a more participatory approach”.* As Chair of the Intergroup on Active Ageing, Mr. Van Nisterlrooij underlined that *“this is something we – at both the URBAN Intergroup and the Intergroup on Active Ageing, Intergenerational Solidarity and Families issues- value a lot”.*

Dr. Juliane Jarke reported on how older adults were engaged during the Mobile-Age project and emphasized the role of local and regional governments when it comes to citizen participation. *“Local and regional information services are more suitable for co-creation projects than nationwide transaction services”.* This demonstrates the important role cities and communities may play in the co-creation of meaningful digital public services.

Furthermore, Prof. Hayes highlighted that the so-called “pathways to access”, which were explored and implemented in the project, do not encompass only accessibility and technological issues, but lead to what is meaningful to seniors. *“We start with the assumption that we design services for older adults, but we need to break such assumption if we want digital services to be meaningful for all. Intermediaries (family members, friends, carers, colleagues...) are a vital component in this process”*, especially such a

digitalized one, that goes beyond geographical borders and allows connections to everywhere from everywhere. It is more realistic to think about **mediated access**, rather than individual access.

Closing the event, MEP Jan Olbrycht underlined that “as politicians, we must think about what can we do for the people, how we can improve their lives by reinforcing trust and using trustworthy technology.” As Chair of the URBAN Intergroup, he expressed his satisfaction on the event: “I am very happy of our deep and optimistic debate with AGE Platform Europe and Mobile-Age at the European Parliament. We did not speak about technology, but mainly about people! Firstly, we need to identify people’s needs by working with them. We then need to identify issues and concerns that affect people most, in order to meet their expectations. Only then, accessibility to different services in cities should be improved. This is the positive approach presented by the Mobile-Age project!”

Further references from the Mobile-Age project

The Mobile-Age project encourages to follow up this work, especially by using the **Interactive Platform and Guidebook for Co-Creation -**

CIDER: <http://co-creation.mobile-age.eu/>

Every co-creation process is unique. This guidebook will give you an impression of what it means to co-create and what it requires, thereby providing you with practical guidance and orientation based on previous experiences.

Mobile-Age moreover issued **policy recommendations** as lessons learnt from the whole co-creation experience.
